Profile Summary

Senior Platform Engineer with 4+ years of experience designing and operating production-grade cloud platforms across AWS, GCP, and Azure. Specialized in building Kubernetes-based platforms, multi-cloud CI/CD pipelines, and MLOps infrastructure with strong focus on reliability, security, observability, and cost-aware design. Proven ownership of end-to-end platform architecture, incident response, and large-scale system migrations, while leading engineers and collaborating closely with product and business stakeholders.

Professional Experience

Innovatics | Technical Lead – Platform & Cloud Engineering | 04/2024 – Present

- Own end-to-end design and operation of a **cloud-agnostic ML & compliance platform (NexML)**, deployed across AWS, GCP, and Azure.
- Lead architecture and delivery of **Kubernetes-based platforms** using Helm, enabling standardized, repeatable multi-environment deployments.
- Designed and operated **CI/CD pipelines** (Terraform, Jenkins, Bitbucket Pipelines, Azure DevOps) for backend, frontend, and infrastructure workloads.
- Led migration of a **legacy Ruby system (9 databases) to Python**, improving maintainability and production readiness.
- Implemented **observability and alerting** at infrastructure and application layers, enabling proactive failure detection and faster incident response.
- Owned **production security and incident response**, including investigation and remediation of a critical AWS credential compromise using CloudTrail and IAM analysis.
- Designed **serverless and cloud-native components** (AWS Lambda, API security, audit pipelines) supporting regulatory and compliance requirements.
- Mentored and led engineers, providing technical direction, design reviews, and ownership of delivery outcomes.

Razor Edge | Full Stack Engineer – Cloud & DevOps Focus | 04/2022 – 03/2024

- Built and operated **cloud-hosted backend platforms** using Flask/FastAPI, deployed on AWS ECS with containerized workloads.
- Designed and maintained **scalable REST APIs** (100+ endpoints) supporting data-intensive financial and analytics applications.
- Implemented **CI/CD workflows and container-based deployments**, improving release reliability and reducing manual intervention.
- Developed **AI-enabled systems** (stock analytics, automated helpdesk) integrating ML/NLP services into production applications.
- Collaborated closely with product and business teams to deliver **production-ready systems** with performance and reliability focus.

Technical Skills

- **Cloud & Platforms:** AWS, GCP, Azure | Cloud-native & multi-cloud architectures
- **Containers & Orchestration:** Kubernetes, Helm, Docker, ECS, Fargate
- **CI/CD & IaC:** Terraform, Jenkins, Bitbucket Pipelines, Azure DevOps, GitHub Actions
- **Observability & Security:** CloudWatch, Prometheus, Kubernetes alerts, IAM, incident response
- **Backend & MLOps:** Python (FastAPI, Flask, Django), REST APIs, ML pipelines, model deployment
- **Data & Storage:** PostgreSQL, MongoDB, MySQL, Redis
- **Collaboration:** Git, GitHub, Bitbucket

Key Projects

Kubernetes Compliance Platform (Compliance.ai) | Platform & Cloud Architecture

- Designed and operated a **production-grade Kubernetes platform** focused on compliance, governance, and reliability.

- Built **Helm-based deployment architecture** enabling standardized, repeatable deployments across environments.
- Implemented **namespace isolation and resource governance**, supporting compliance and multi-tenant workloads.
- Designed **infrastructure- and application-level observability**, including pod health, resource thresholds, and service error monitoring.
- Deployed frontend via **Cloud CDN**, ensuring secure, highly available global access.
- Ensured **production readiness** through automated deployments, monitoring, and incident visibility.

ML_STUDIO | Multi-Cloud MLOps Platform

- Designed and owned a **cloud-agnostic MLOps platform** enabling model development, deployment, and monitoring across AWS, GCP, and Azure.
- Built **Kubernetes- and serverless-based deployment workflows** supporting scalable, isolated, and cost-aware model serving.
- Implemented **end-to-end MLOps lifecycle** including data ingestion, preprocessing, AutoML, model deployment, and monitoring.
- Designed **dynamic scaling mechanisms** to optimize performance and infrastructure cost under variable workloads.
- Implemented **security, audit, and compliance pipelines**, including API-level protection, audit trails, and automated compliance reporting.
- Enabled **custom endpoint deployments** and client-specific configurations without impacting core platform stability.

Legacy Modernization & Deployment Automation (Control Case, TenderHealth)

- Led **modernization of a legacy backend system**, migrating from Ruby to Python across multiple databases and preparing the platform for production deployment.
- Designed **serverless and cloud-native components** using AWS Lambda to improve scalability and operational simplicity.
- Built and optimized **CI/CD pipelines** for backend and frontend services, improving deployment speed and reliability.
- Performed infrastructure R&D including **DNS configuration, secure server setup, and domain mapping** for client-facing platforms.

Platform & Application Support (IERA, Computer Vision Platform)

- Contributed to **backend and frontend components** of production platforms, supporting feature delivery and system stability.
- Built and maintained **CI/CD pipelines** for staging environments using Terraform and Jenkins.
- Supported **R&D and feature integrations** for evolving product requirements, collaborating across engineering teams.

AI-Enabled Application Platforms (Razor Edge)

- Built and operated **data-intensive backend platforms** integrating AI/ML services for analytics and automation use cases.
- Designed and deployed **scalable REST APIs** using Flask/FastAPI on AWS ECS, with caching and performance optimizations.
- Integrated **LLM-based workflows** to translate natural language inputs into structured analytics and automated decision logic.
- Implemented **event-driven notification and automation systems**, improving response times and operational efficiency.

Certifications

- AWS Certified Solutions Architect – Associate (*In Progress*)

Achievements

- Successfully delivered a **production-grade Kubernetes compliance platform** with Helm, observability, and multi-level alerting.
- Led **remediation of a critical AWS security incident**, identifying IAM misuse, rotating credentials, and restoring platform security.
- Designed and delivered **audit and compliance reporting pipelines** for an enterprise ML platform, strengthening governance readiness.
- Ranked **Top 60 out of 2000+ teams** in an IoT hackathon for designing a high-availability cloud architecture.

Education

Institute of Engineering and Management, Kolkata

B.Tech in Electronics and Communication Engineering | CPI: 8.84 | 08/2018 - 06/2022
